3. INSTALLATION

INSET		The sink is placed in a worktop.	
UNDERMOUNT & OFFSET		The sink is fitted under the worktop. The worktop should be water resistant.	

4. MATERIAL

SMC (SHEET MOULDING COMPOUND)		Sinks are moulded on hydraulic presses. The material is applied in the press and then the sink is formed under pressure and heat.	Mineral loads : 50% Polyester resin : 30% Long glass fiber : 20%
PIMC (POWDER IN MOULD COATING)		A powder is applied before pressing the sink as a protective coating which improves scratch resistance.	Mineral loads : 50% Polyester resin : 30% Long glass fiber : 20% + Coating made of polyester resin and glass microbeads.
BMC (BULK MOULDING COMPOUND)		Sinks are moulded on hydraulic press which high density material which offers a touch closed to the granite as well as a high resistance to scratching.	Mineral loads : 55% Polyester resin : 30% Short glass fiber : 15%

SMC BENEFITS

RESISTANCE TO MECHANICAL SHOCKS

Very resistant material to shocks. Easy to handle and to ship.

LIGHTNESS

Ultra-light material, easy to ship and install : on average 5 kg for a 1 bowl sink.

RESISTANCE TO STAINS

Tests done by independant accredited laboratory.

RESISTANCE TO HEAT

Material resistant to dry heat (180 celsius degrees)

FOOD CONTACT

Material certified food contact by an independent accredited laboratory.

LONG-LAST COLOURS

100% mass-coloured
Easy to clean

EASY TO DRILL

For tap installation

PIMC SINKS

PROCESS

A powder is applied before pressing the sink as a protective coating which improves scratch resistance.

MATERIAL

Mineral loads : **50%**
Polyester resin : **30%**
Long glass fiber : **20%**
+ coating made of polyester resin & glass microbeads

EVO	32
NALI	34
Einna	36

PIMC BENEFITS

IMPROVED SCRATCH RESISTANCE

Multilayer material: SMC base coated with a thin layer of protective paint (resin). This coating protects the sink from scratches.

RESISTANCE TO MECHANICAL SHOCKS

Very resistant material to shocks. Easy to handle and to ship.

LIGHTNESS

Ultra-light material, easy to transport and install : on average 5 kg for a 1 bowl sink.

RESISTANCE TO STAINS

Tests done by independent accredited laboratory.

FOOD CONTACT

Material certified food contact by an independent accredited laboratory.

RESISTANCE TO HEAT

Material resistant to dry heat (180 celsius degrees)

LONG-LAST COLOURS

Easy to clean

EASY TO DRILL

For tap installation

NALI - PIMC

HIGH SCRATCH RESISTANCE

SMC sink covered with a protective layer applied in the mould before pressing

NALI PIMC

- Material : SMC resin + PIMC coating :
 - ▶ Mineral loads : 50 %
 - ▶ Polyester resin : 30%
 - ▶ Long glass fiber : 20 %
 - ▶ Coating made of polyester resin and glass microbeads
- Reversible
- Easy to drill for tap installation
- Supplied with basket strainer waste (Ø90 mm) and space saving siphon (outlet : 40 mm)
- Supplied with 6 clips for sink installation on 28 and 38 mm worktops.

BMC SINKS

PROCESS

Sinks are moulded on hydraulic press which high density material which offers a touch closed to the granite as well as a high resistance to scratching.

MATERIAL

Mineral loads : **55%**
Polyester resin : **30%**
Short glass fiber : **15%**

ALINEO 40

FLORA 42

VICTORIA 44

HEXO 46

BMC BENEFITS

TOUCH CLOSE TO GRANITE

Touch very close to a granite sink.

GRANITE APPEARANCE

Quality of being close visually to a granite sink.

IMPROVED SCRATCH RESISTANCE

High density material with improved scratch resistance

WEIGHT LIKE GRANITE

On average 8 kg for a 1 bowl sink.

RESISTANCE TO HEAT

Material resistant to dry heat (180 celsius degrees)

RESISTANCE TO STAINS

Tests done by independant accredited laboratory.

LONG-LAST COLOURS

100% mass-coloured
Easy to clean

EASY TO DRILL

For tap installation

BMC COLOURS

CLEANING PRODUCT

MINERALE OIL

- Revitalizes and gives radiance to your sink
- Attenuates scratches and gives shine
- Helps erase white spots on the sink
- To apply on resin sinks (SMC, PIMC, BMC)
- Apply with a soft and dry cloth twice a month
- 100% white minerale oil
- Keep out of reach of children
- 250 ml bottle
- Inviolable cap

What regular maintenance is needed on my composite sink ?

Regular maintenance of the composite sink will help maintain the qualities of your sink. Without regular maintenance, the sink will become greasier and will appear dirty.

- With a soft cloth or soft sponge, clean your sink daily with hot water and soap or with a soft-acting detergent
- Rinse with clear water and dry by using a soft cloth.
- Do not use abrasive materials or products that possess abrasive agents. Do not use products that have aggressive or corrosive agents when up keeping your sink.
- Never leave humid or wet cast-iron products or other oxidising materials for a prolonged period of time on your sink.

My resin sink has scratches or abrasion marks :

In the case of scratches or abrasion marks from pans, pots, lids, etc... apply paraffin oil or vegetable oil on the sink with a towel. Wait for 5 minutes and wipe gently with a soft cloth. These marks will disappear.

My resin sink has lime scale marks :

The stagnant water on the sink bowl will evaporate over time and leave small traces of lime scale. The level of limescale will vary according to the levels of lime scale in the water. Regular cleaning of the sink is recommended. A room temperature white vinegar treatment will allow to dissolve these stains / marks. Apply white vinegar on the sink with a sponge. Wait for 5 minutes and wipe gently.

My resin sink has stains :

In the event of marks, use a mixture of 10 sachets of baking powder in 3 litres / 5 pints of water and leave it act for half a day. After letting it sit for the period of time, rinse thoroughly with clear water and dry with a soft cloth.

The use of bleach can be used to treat wine, carrot, tea, curry, beetroot stains. Apply bleach on a sponge and after clean the sink with clear water. For paint or ink stains, please use alcohol.
